***By law the user must take due care, obtaining expert advice when necessary, to avoid unnecessary pain and distress when using the product other than as directed on the label.***

### Treatment Programmes

Droncit is indicated for the treatment of dogs and cats for tapeworm only. For routine worming a broad spectrum product such as Drontal Allwormer for Dogs A5557 or Drontal Allwormer for Cats 4kg A7042 is recommended.

### Sheep Measles Control in Dogs (Taenia ovis)

Dogs should be treated monthly with Droncit. For general dog health every three months the Droncit can be replaced with Drontal Allwormer for Dogs A5557. This will not compromise control of sheep measles as Drontal Allwormer for Dogs A5557 is also effective against the sheep measles tapeworm.

### General Tapeworm Treatment

Treat as often as required when tapeworm segments are seen. Dogs and Cats infested with fleas can become rapidly reinfested with Dipylidium Caninum in the absence of flea control. Dogs and cats that hunt small prey may also be more susceptible to Tapeworm infestation.

### Dosage and Administration

Droncit is given as a single dose by mouth and may be administered immediately before or with a meal.

1. Dogs: Echinococcus granulosus (Hydatid Tapeworm)  
5 mg/kg

A handwritten signature in blue ink, appearing to be 'M. J. ...', located below the red stamp.
